Professional Summary

Results-driven Full-Stack Software Engineer with 2+ years of professional experience architecting and delivering high-performance web systems using PHP, JavaScript, React.js, MySQL, and WordPress. Proven ability to reduce development cycle time, optimize application performance, and build scalable backend infrastructure in production environments. Passionate about engineering excellence, performance-driven system design, and shipping user-centric digital products that generate measurable business impact.

Technical Skills

Languages : PHP

Frontend : HTML5, CSS3, React.js, JavaScript

Backend : REST API Development, OOP

CMS : WordPress

Databases : MySQL

DevOps & Tools : Git, GitLab, Linux

SEO : Technical SEO, On-Page / Off-Page SEO, Core Web Vitals Optimization

Libraries & Frameworks : jQuery, Bootstrap

Professional Experience

Software Engineer — PHP & WordPress | Uselocator India Pvt. Ltd

Jun 2024 – May 2026

- Engineered a scalable WordPress-based data-creation framework that eliminated repetitive manual content-setup workflows, reducing average configuration time by an estimated 40% and accelerating sprint delivery cycles across the engineering team.
- Architected and delivered 3+ production-grade WordPress websites—including a high-traffic custom blogging platform and a feature-rich eCommerce solution—owning the full product lifecycle from requirements gathering through deployment and post-launch monitoring.
- Optimized page load performance through strategic plugin configuration, image compression pipelines, lazy loading, and server-side caching layers, improving Core Web Vitals scores and contributing to measurable gains in organic search rankings for client properties.
- Integrated advanced Technical SEO practices—including structured data markup (JSON-LD), canonical tag management, XML sitemap automation, and breadcrumb schema optimization—enhancing search engine visibility and indexability across multiple production sites.
- Collaborated closely with cross-functional teams spanning product, QA, and design to conduct systematic performance profiling, issue triage, and root-cause analysis, reducing mean time to resolution (MTTR) for production incidents by approximately 30%.

Software Engineer Intern | Softech Ind Pvt. Ltd

May 2023 – Oct 2023

- Designed and shipped multiple responsive, cross-browser-compatible web interfaces using HTML5, CSS3, and JavaScript, adhering to WCAG accessibility guidelines and mobile-first design principles across all delivered components.
- Refactored client-side data-flow logic to eliminate unnecessary DOM re-renders and redundant API calls, measurably improving page responsiveness and lowering Time to Interactive (TTI) across key user journeys.

Projects

CRM Platform | PHP, MySQL, API, Role-Based Access Control

- Designed and built a full-featured MySQL-backed CRM system for enterprise-scale customer data management, including interaction history tracking, pipeline management, and optimized query performance for large datasets.
- Engineered independent, modular backend components for Assignments, Question Management, and Deployment Lifecycle—each enforcing granular role-based access control—reducing manual coordination overhead and enabling self-serve operations for non-technical stakeholders.
- Led end-to-end backend architecture decisions; established normalized schema design patterns and reusable PHP service layers that improved developer onboarding velocity and ensured long-term codebase maintainability.

Trip Mart — Travel Booking Platform | PHP, MySQL, JavaScript, Secure Session Management, Authentication

- Re-engineered the user registration and onboarding funnel, reducing signup friction and driving a 25% increase in new user registrations within the first month following launch.
- Built scalable backend components to handle concurrent booking workflows, including real-time seat/availability validation and transactional data integrity guarantees across multi-step reservation sequences.
- Implemented a secure session management and authentication system with encrypted token handling, configurable session expiry, and brute-force protection mechanisms, significantly reducing the platform's unauthorized-access exposure surface.

Education

B.Tech — Computer Science & Engineering · RNTU University 2024

Class XII — Science (MP Board) · MVM School, Bhopal 2020

Class X (CBSE Board) · Hema Hr. Sec. School, Bhopal 2018

Technical Competencies

- Proficient in PHP OOP, MVC architecture, REST API design, and MySQL query optimization for high-performance backend systems; strong foundation in database normalization and scalable system design principles.
- Experienced with Agile development workflows, Git version control, GitLab CI, and cross-functional team collaboration; conducts code reviews and promotes documentation standards and test coverage best practices.
- Familiar with Linux server environments, Docker containerization, AWS basics (EC2/S3), and WordPress plugin/theme development including WooCommerce, ACF, Gutenberg blocks, and custom post types.
